Election/R strictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a computer system and computer readable medium comprising a sequence, classified in class 700, subclass 90.
- II. Claims 6-7, drawn to a method to compare sequences, classified in class 702, subclass 20.
- III. Claim 8, drawn to a method to identify a feature in a sequence, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Invention I is related to Inventions II and III as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the computer system of Group I can be use din either of the methods of Groups II or III.

Inventions II and III are separate and distinct. The Groups are related in that both recite use of the same products/sequences; however, each method is directed to a different result and recites different method steps requiring a different search. It is further noted that the claims of each Group are not necessarily limited to use of the same sequence(s). In addition, the method of each Group may be preformed without knowledge of or reference to the steps or results of the method of other Group. For these reasons, Groups I and II are separate and distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Also, these inventions are distinct for the reasons given above and the search required for Groups II and III is not required for Group I, the search required for Group II is not required for Group III, and the search required for Group III is not required for Group II, therefore restriction for examination purposes as indicated is proper.

Sequence Election Requirement Applicable to All Groups

In addition, each Group detailed above reads on patentably distinct Groups drawn to multiple SEQ ID Numbers. The sequences are patentably distinct because they are unrelated sequences and each unrelated sequence is considered a separate and distinct product, therefore a further restriction is applied to each Group. For an elected Group drawn to either amino acid or polypeptide sequences, the applicant must further elect a **single** amino acid or a **single** polypeptide sequence. (See MPEP 803.04). Due to the increasingly large size of sequence databases which must be searched and the increasing numbers of applications requiring sequence searches, it creates an undue burden on the Office to search more than a single sequence (product) per application. For these reasons, the requirements of 37 CFR 1.141 et seq. are no longer waived and applicant is required to elect a single sequence for examination. Applicant is reminded that this is a restriction requirement, not an election of species.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention and the SEQ ID number to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1631

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
